Softsense Technology Attribution & Use Policy

Protecting Softsense IP — Software, Engines, and STAROS

Effective Date: November 02, 2025

1. Purpose

This Policy defines how third parties may (or may not) use code, engines, libraries, assets, or any other technical or creative output created by Softsense Corporation and Softsense Tech India Pvt. Ltd. (together, “Softsense”).

2. Definitions

• "Softsense IP": All source code, binaries, modified engines (including modified Chromium optimizations), designs, documentation, assets, and derivative works authored by Softsense.

• "STAROS": The operating system project and any associated modules, subsystems, or proprietary components.

3. Permitted Use

Softsense may, at its discretion, grant explicit written permission for licensed use of select components. Permissions are granted only via a written license or contribution agreement signed by an authorized representative of Softsense.

4. Prohibited Use

Unless you have an explicit, written license from Softsense, you MAY NOT:

- Copy, redistribute, rebrand, or repurpose Softsense IP.
- Use Softsense’s proprietary engine optimizations in third-party browsers or products.
- Embed STAROS code or modules into other operating systems or commercial products.

Unauthorized use is strictly prohibited and will be met with enforcement steps described below.

5. Attribution and Open Source

When Softsense elects to release components under an open-source license, that license will explicitly state the permitted use and attribution requirements. If code is not explicitly released under an open license, it remains proprietary.

6. Enforcement

Softsense enforces its rights through a graduated process: polite notice, request to cease-and-desist, and, if necessary, legal action. Evidence of provenance (timestamps, private repository history, commits, and archived copies) will be used to support claims.

7. STAROS — Special Clause

Softsense treats STAROS and all related code as highly sensitive proprietary IP. ANY

Softsense Technology Attribution & Use Policy

Protecting Softsense IP — Software, Engines, and STAROS

Effective Date: November 02, 2025

unauthorized reuse of STAROS code or components will result in immediate action. Softsense states plainly: unauthorized use of STAROS code is strictly forbidden. If you use STAROS code without a license, expect firm legal enforcement (civil remedies & injunctive relief).

8. How to Request a License

To request use, license, or collaboration: send an email to softsensetech@outlook.com with your organization details, intended use, and a copy of the relevant code or proposal. Softsense will respond with terms.

9. Evidence & Recordkeeping

Maintain provenance records of your own work. Softsense will maintain dated backups, commits, and author records to support IP claims.

10. Contact & Notice

All legal notices should be sent to:
